

16 Bit Octal Spi Dac Achieves 4lsb Inl Max

Thank you very much for reading 16 bit octal spi dac achieves 4lsb inl max. As you may know, people have search hundreds times for their favorite readings like this 16 bit octal spi dac achieves 4lsb inl max, but end up in harmful downloads.

Rather than reading a good book with a cup of tea in the afternoon, instead they cope with some harmful bugs inside their laptop.

16 bit octal spi dac achieves 4lsb inl max is available in our book collection an online access to it is set as public so you can download it instantly.

Our book servers hosts in multiple locations, allowing you to get the most less latency time to download any of our books like this one.

Merely said, the 16 bit octal spi dac achieves 4lsb inl max is universally compatible with any devices to read

The AD5676 is a low power, octal, 16-bit buffered voltage output digital-to-analog converter(DAC). The device includes a gain select pin, giving a full-scale output of V_{REF} (gain = 1) or $2 \times V_{REF}$ (gain = 2). The AD5676 DAC operates from a single 2.7 V to 5.5 V supply and is guaranteed monotonic by design.

16-bit octal SPI DAC achieves ± 4 LSB INL (Max) July 1, 2009 by Ismini Scouras. Comments 0. Milpitas, Calif. Linear Technology Corp. has introduced the LTC2656, a 16-bit octal digital-to-analog converter (DAC) that it says offers ± 4 LSB INL maximum over temperature, a factor of three times better than the nearest octal competitor.

~~Planet Analog - 16-bit octal SPI DAC achieves ± 4 LSB INL (Max)~~

The LTC2656 is available, along with the LTC2657, an I2C-compatible 16-bit octal DAC. The LTC2656 16-bit and 12-bit DACs and demo boards are now available. The LTC2657 samples will be available in July, with production volumes scheduled for September 2009. Pricing begins at \$8.95 each for the 12-bit options and \$17.95 each for the 16-bit ...

The LTC2666IUH-16#PBF is an octal 16bit SoftSpan digital to analogue (DAC) converter with integrated precision references in 32 pin QFN package. This monotonic DAC has built-in rail to rail output buffers. The SoftSpan DAC offers five output ranges up to ± 10 V. The range of each channel is independently programmable or the device can be hardware configured for operation in a fixed range.

The 16-bit serial word consists of 2 "don't care" bits, 3 address bits, 3 control bits, and 8 data bits. Both the input and DAC registers can be updated independently or simultaneously with a single software command. The asynchronous control input, active-low LDAC, provides simultaneous updating of all 8 DAC registers.
