## *Autonomous Navigation Of A Nonholonomic Le Robot In A*

The navigation and control of an autonomous vehicle is a highly complex task. Making a vehicle intelligent and able to operate “unmanned” requires extensive theoretical as well as practical knowledge. An autonomous vehicle

# Bookmark File PDF

must be able to make decisions and respond to situations completely on its own. Navigation and control serves as the major

*Navigation and Control  
of an Autonomous  
Vehicle*

By considering nonholonomic kinematic constraints, the navigation problem

# Bookmark File PDF

of a differential drive robot generally followed these two steps: first, the velocity is generated by the ORCA based on the assumption that the robot is holonomic; second, the robot tracks this velocity by using the controller with nonholonomic constraints .
