Shell Electron Pair Repulsion model. Also known as VSEPR, can show us an upcoming prediction of a simple molecule. This will lead us to build models which will give us an accurate prescription or idea of three-dimensional structures. 2. Theory and principles We must determine the electrons in the molecule are distributed, for example if they have any sort of bonds.

Another fabulous use for molecular models on this topic is demonstrating how a molecular can have chiral carbons and still not be a chiral molecule. For example, use your kit right now to build cis -1,2-dichlorocyclohexane, confirm that it does indeed have two chiral centers, and then build its mirror image.
