Covalent Bonding • covalent bond is a shared electron pair that connects the atoms in molecular (covalent) compounds • when two atoms get close enough, their electron clouds overlap, allowing the nucleus to attract the other atom's electrons which results in a net attraction between the two atoms • if atoms are too close together, they will repulse each other

242 Chapter 8 • Covalent Bonding
Single Covalent Bonds When only one pair of electrons is shared, such as in a hydrogen molecule, it is a single covalent bond. The shared electron pair is often referred to as the bonding pair. For a hydrogen molecule, shown in Figure 8.4, each covalently bonded atom equally attracts the pair of shared electrons.
