How to encourage investigative, discovery play with babies and children aged 0-5. Heuristic Play is a form of exploratory, investigative play that builds a whole range of skills for all children from birth to five. This guide looks at four age groups from birth to five and provides practical activities for setting up heuristic play sessions. Each session comes with expert advice on:
· How to set up the session for each age group
· The level of adult involvement
· How to plan for these activities within the EYFS
· How heuristic play relates to schemas of behaviour
This easy to read and practical guide is the only one of its kind and an absolute essential for anyone working in the early years.

On 12th September 1977, Steve Biko was murdered in his prison cell. He was only 31, but his vision and charisma - captured in this collection of his work - had already transformed the agenda of South African politics. This book covers the basic philosophy of black consciousness, Bantustans, African culture, the institutional church and Western involvement in apartheid.

"Turn yourself into a Data Head. You'll become a more valuable employee and make your organization more successful." Thomas H. Davenport, Research Fellow, Author of Competing on Analytics, Big Data @ Work, and The AI Advantage
You ' ve heard the hype around data—now get the facts. In Becoming a Data Head: How to Think, Speak, and Understand Data Science, Statistics, and Machine Learning, award-winning data scientists Alex Gutman and Jordan Goldmeier pull back the curtain on data science and give you the language and tools necessary to talk and think critically about it. You ' ll learn how to: Think statistically and understand the role variation plays in your life and decision making
Speak intelligently and ask the right questions about the statistics and results you encounter in the workplace
Understand what ' s really going on with machine learning, text analytics, deep learning, and artificial intelligence
Avoid common pitfalls when working with and interpreting data
Becoming a Data Head is a complete guide for data science in the workplace: covering everything from the personalities you ' ll work with to the math behind the algorithms. The authors have spent years in data trenches and sought to create a fun, approachable, and eminently readable book. Anyone can become a Data Head—an active participant in data science, statistics, and machine learning. Whether you ' re a business professional, engineer, executive, or aspiring data scientist, this book is for you.

Go ahead, be skeptical about big data. The author was—at first. When the term " big data " first came on the scene, bestselling author Tom Davenport (Competing on Analytics, Analytics at Work) thought it was just another example of technology hype. But his research in the years that followed changed his mind. Now, in clear, conversational language, Davenport explains what big data means—and why everyone in business needs to know about it. Big Data at Work covers all the bases: what big data means from a technical, consumer, and management perspective; what its opportunities and costs are; where it can have real business impact; and which aspects of this hot topic have been oversold. This book will help you understand:
• Why big data is important to you and your organization
• What technology you need to manage it
• How big data could change your job, your company, and your industry
• How to hire, rent, or develop the kinds of people who make big data work
• The key success factors in implementing any big data project
• How big data is leading to a new approach to managing analytics
With dozens of company examples, including UPS, GE, Amazon, United Healthcare, Citigroup, and many others, this book will help you seize all opportunities—from improving decisions, products, and services to strengthening customer relationships. It will show you how to put big data to work in your own organization so that you too can harness the power of this ever-evolving new resource.
