A deadlock occurs when all processes lock the resource simultaneously (black lines). The deadlock can be resolved by breaking the symmetry. In concurrent computing, a deadlock is a state in which each member of a group is waiting for another member, including itself, to take action, such as sending a message or more commonly releasing a lock.

~~Deadlock - Wikipedia~~

A mortice deadlock is primarily designed to work in conjunction with entrance doors on buildings. They can only be operated with a key and work with a single bolt locking mechanism, meaning it will lock when shut and can then only be opened with the key. This may act as a deterrent for thieves as they cannot break a nearby window and open the lock from the inside, unless the key is left in the ...
