In model theory, a branch of mathematical logic, two structures M and N of the same signature are called elementarily equivalent if they satisfy the same first-order \mathcal{L} -sentences. If N is a substructure of M , one often needs a stronger condition. In this case N is called an elementary substructure of M if every first-order \mathcal{L} -formula $\phi(a_1, \dots, a_n)$ with parameters a_1, \dots, a_n from N is true in N if and only if it is true in M . If N is an elementary substructure of M , then M is called an ...

Elementary equivalence - Wikipedia

The theory of structures deals with the mechanics of slightly deformable bodies. The 'slight deformations are such that, viewed overall, the geometry of the structure does not appear to alter, so that, for example, equilibrium equations written for the original structure remain valid when the structure is deformed.
