Sequencing batch reactor (SBR) is a wastewater treatment system based on activated sludge operated on a sequence of fill and draw cycles. SBR treatment for wastewater produces an effluent that is better than that obtained by a secondary treatment and can operate over a wide range of hydraulic and organic flow variations ( Mace and Mata-Alvarez ...

Sequencing Batch Reactor - an overview | ScienceDirect Topics

Sequencing batch reactors (SBR) or sequential batch reactors are industrial processing tanks for the treatment of wastewater. SBR reactors treat waste water such as sewage or output from anaerobic digesters or mechanical biological treatment facilities in batches. Oxygen is bubbled through the waste water to reduce biochemical oxygen demand (BOD) and chemical oxygen demand
