Practical science is important for learning, not only because doing experiments is a good way to learn scientific ideas and theories. The UK needs more scientists, engineers and technicians if our knowledge economy is to flourish, and practical science shows students at first hand how scientists and technicians work.

Empower students with the confidence to live on their own. Our in-depth study combines the three lessons in this series: Independent Living, Managing Money, and Employment & Volunteering. Students will start by finding their own place to live and knowing how to get around. Then, students learn how to budget and prepare for their future. Finally, students join the workforce by learning how to write a resume and gaining valuable interview skills. Comprised of reading passages, graphic organizers, real-world activities, crossword, word search and comprehension quiz, our resource continues the study of necessary Life Skills everyone should learn before venturing out on their own. All of our content is reproducible and aligned to your State Standards and are written to Bloom's Taxonomy.

Students gain the skills to live independently. Understand the difference between renting and buying a home. Then, become familiar with the expenses associated with living alone. From there, get to know bus routes to determine the fastest way to get around. Be prepared in case of fire with your own fire route plan. Find out how saving energy will save money. Finally, get to know who to contact in case of injury. Comprised of reading passages, graphic organizers, real-world activities, crossword, word search and comprehension quiz, our resource combines high interest concepts with low vocabulary to ensure all learners comprehend the essential skills required in life. All of our content is reproducible and aligned to your State Standards and are written to Bloom's Taxonomy.

Study & Master Agricultural Sciences Grade 12 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Agricultural Sciences.

In Hands-On Science Mysteries for Grades 3-6, the authors connect science to real-world situations by investigating actual mysteries and phenomena, such as the strange heads on Easter Island, the ghost ship Mary Celeste, and the “Dancing Stones” of Death Valley. The labs are designed to encourage the development of science inquiry, in which students will observe, take notes, make diagrams, interpret data, and arrive at solutions, and include extensions for further investigation.

Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments—assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. *Knowing What Students Know* essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment—what students know and how well they know it—as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, *Knowing What Students Know* will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

Many teachers in regular classrooms feel unprepared to teach students with learning disabilities. Fortunately, brain research has confirmed that strategies benefiting learners with special challenges are suited for engaging and stimulating all learners. In this book, neurologist and classroom teacher Judy Willis explains that we can best help students by putting in place strategies, accommodations, and interventions that provide developmentally and academically appropriate challenges to suit the needs, gifts, and goals of each student. *Brain-Friendly Strategies for the Inclusion Classroom* will help teachers

- \* Understand how the brain learns and the technologies that reveal this process.
- \* Implement strategies that are compatible with students' individual learning styles and honor their multiple intelligences.
- \* Improve the focus of students with attention disorders and help them gain the confidence and skills they need to develop goal-oriented behaviors.
- \* Create an enriching learning environment by incorporating student-centered activities, discovery and hands-on learning experiences, cross-curricular learning, and multisensory lessons.
- \* Implement strategic review, study, and test preparation strategies that will allow students to retain information and connect it with future learning.
- \* Build safe, supportive classroom communities and raise class awareness and empathy for students with learning disabilities.

It's time for teachers to lower the barriers, not the bar. Using strategies that align with research on how people's brains function, teachers can engage all students as individuals and help them reach their maximum potential with joy and confidence.

*Make Rich Math Instruction Come to Life Online* When distance learning is the “new normal,” educators know that rich remote math teaching involves more than direct instruction and endless practice problems. This powerful guide translates what we know about research-based, equitable, rigorous face-to-face mathematics instruction into an online venue and equips math teachers to:

- Build students' agency, identity, and strong math communities
- Promote mathematical thinking, collaboration, and discourse
- Incorporate rich mathematics tasks and assign meaningful homework and practice
- Assess mathematics learning from a distance

*Teaching Math at a Distance* offers the support, clarity, and inspiration teachers need to provide all students with deep learning and academic growth.
