passive. They rely on no controlled sources but seek out naturally occurring variations in the earth's gravity and magnetic fields. For this reason, some military uses of these surveys have long included quiet detection of submarines and volatile unexploded munitions.

Magnetic and Gravity Methods in Mineral Exploration: the ...

Gravity and magnetic methods can be directly related to physical properties of rocks, i.e. the density and the susceptibility, and are very useful to field geologists and geophysicists in the mapping and identification of various rock types. They are also used for the detection of minerals with large contrast in density and susceptibility ...

•Geophysical exploration techniques that employ both gravity and magnetics are passive. By this, we simply mean that when using these two methods we measure a naturally occurring field of the earth: either the earth's gravitational or magnetic fields. Collectively, the gravity and magnetics methods are often referred to as
