The second factor is device compatibility. Not all IPTV service providers will work on all TV boxes so it is important to make sure that the subscription you pay for will work on both the TV box and the IPTV app that you have chosen for yourself. The final factor is what content the provider specializes in.

IPTV and Internet Video clearly explains and demystifies the functions, markets, and future impact of this exploding technology. This book contains an overview of hardware, software, and Internet technologies, case studies, and covers a range of products and services. It is a guide to help leaders master the key trends and drivers transforming the world of broadcast television and the Web. Each piece of the puzzle is discussed in detail, from head ends, Web portals and VOD servers through advanced IP networks, DSLAMs and xDSL lines to viewers' set-top boxes and multimedia PCs. You'll get a working knowledge of IPTV, enabling both non-technical and technical professionals to accurately analyze the emerging technology and business opportunities. Written by two leading digital media experts with, each with 25 years technology development experience and global insight, this book also looks ahead to IPTV's rapid deployment and future growth. \* Part of the NAB Executive Technology Briefing series which brings you industry technology information in a non-technical fashion \* Comprehensive introduction to IPTV and Internet Video networks and applications \* Quickly get up to speed on terms, market, and the business as IPTV and Internet broadcast distribution \* Reality Check perspectives in each chapter tie theory to real-world case studies

Since the time when interactive television emerged as a medium for the home environment, it has been permanently evolving. Changing requirements and user behavior, e.g., the demand for being mobile and have access to information and entertainment anywhere and anytime, are challenging interactive TV. New kinds of interactive services have to be conceived for the increasing mobile, ubiquitous requirements of the diverse user groups. In these changing environments, a better understanding of emerging contexts and their implications is essential. This gave birth to the idea for the theme of the EuroITV 2008 Conference: "Changing Television Environments." EuroITV 2008, the 6th edition of the -ropean Conference on Interactive Television, was organized and hosted by the HCI and Usability Unit, ICT&S Center, University of Salzburg, Austria. The EuroITV Conference Series started at Brighton University in 2003 and 2004. It was followed by Aalborg University in 2005, Athens University of Economics and Business in 2006 and by CWI (Centrum Voor Wiskunde en Informatica) in Amsterdam 2007. We would like to thank all former Chairs for making this great conference series happen and/or providing us with the opportunity to host EuroITV 2008.

Find out how modern IPTV technologies will change your experience of television. Internet Protocol Television (IPTV) is rapidly being deployed as a compliment service to existing distribution technologies. Why IPTV? traces the changes in Internet Protocol Television since the mid-1990s and examines what IPTV means today. The author analyzes what delivery of TV over an IP network means, both in terms of possibilities for new services, and in terms of the impact on the network and how it has to be managed. In addition, Why IPTV? helps you understand how introducing IPTV into the Web 2.0 world will impact the new services. It looks at the current trends in the consumer electronics industry as well as the network industry, and describes how the new technology can enhance and extend the existing business models in the TV industry, particularly in advertising; and also how it creates new possibilities, for instance, through personalization. Why IPTV? Interactivity, Technologies, Services: Provides an accessible introduction to IPTV. Covers the technology to build IPTV systems, and shows what lies beyond traditional business models and existing distribution technologies. Considers how IPTV technologies can exploit and change the current trends in consumer electronics and network industry. Explores how the merging of Web 2.0 and IPTV will open new opportunities for services. Addresses hot topics such as IPTV Interaction and Channel Switching, Networking and Streaming with Information Management Systems, Advertising and Personalization of IPTV. Why IPTV? will provide engineers in networking, TV broadcast companies, technology specialists in content creation companies and people in the IPTV industry (including management) with an engaging and insightful reference into Internet Protocol Television.

Examining recent advances in both TV delivery and computing/networking technologies, this book explores profitable, successful next-generation TV offerings. The focus of this comprehensive report is on using advances in internet technologies and networking to deliver competitive, multichannel pay-TV services to customer TV sets.

&> Trust the best-selling Official Cert Guide series from Cisco Press to help you learn, prepare, and practice for exam success. They are built with the objective of providing assessment, review, and practice to help ensure you are fully prepared for your certification exam.
