The New York Times bestselling Crazy Rich Asians series reveals the outrageous world of high-net-worth society with humor and heart. Crazy Rich Asians is now a major motion picture. “There’s rich, there’s filthy rich, and then there’s crazy rich.” —People New Yorker Rachel Chu does not know that her loving boyfriend, Nicholas Young, also happens to be Singapore’s most eligible bachelor and likely heir to a massive fortune. So when she agrees to spend the summer in Nick’s home, her life unexpectedly becomes an obstacle course of old money, new money, nosy relatives, and scheming social climbers. And that’s all before she discovers the true identity of her long-lost father . . . This box set includes the entire trilogy: Crazy Rich Asians, China Rich Girlfriend, and Rich People Problems.

From the Man Booker Prize-winning author of The Sense of an Ending—a rich, witty, revelatory tour of Belle Époque Paris, via the remarkable life story of the pioneering surgeon, Samuel Pozzi. In the summer of 1885, three Frenchmen arrived in London for a few days' intellectual shopping: a prince, a count, and a commoner with an Italian name. In time, each of these men would achieve a certain level of renown, but who were they then and what was the significance of their sojourn to England? Answering these questions, Julian Barnes unfurls the stories of their lives which play out against the backdrop of the Belle Époque in Paris. Our guide through this world is Samuel Pozzi, the society doctor, free-thinker and man of science with a famously complicated private life who was the subject of one of John Singer Sargent's greatest portraits. In this vivid tapestry of people (Henry James, Sarah Bernhardt, Oscar Wilde, Proust, James Whistler, among many others), place, and time, we see not merely an epoch of glamour and pleasure, but, surprisingly, one of violence, prejudice, and nativism—with more parallels to our own age than we might imagine. The Man in the Red Coat is, at once, a fresh portrait of the Belle Époque; an illuminating look at the longstanding exchange of ideas between Britain and France; and a life of a man who lived passionately in the moment but whose ideas and achievements were far ahead of his time.

Now available in an affordable softcover edition, this classic in Springer's acclaimed Virtual Laboratory series is the first comprehensive account of the computer simulation of plant development. 150 illustrations, one third of them in colour, vividly demonstrate the spectacular results of the algorithms used to model plant shapes and developmental processes. The latest in computer-generated images allow us to look at plants growing, self-replicating, responding to external factors and even mutating, without becoming entangled in the underlying mathematical formulae involved. The authors place particular emphasis on Lindenmayer systems - a notion conceived by one of the authors, Aristid Lindenmayer, and internationally recognised for its exceptional elegance in modelling biological phenomena. Nonetheless, the two authors take great care to present a survey of alternative methods for plant modelling.

Pioneering work by the great modernist painter, considered by many to be the father of abstract art and a leader in the movement to free art from traditional bonds. 12 illustrations.

After a long time of neglect, Artificial Intelligence is once again at the center of most of our political, economic, and socio-cultural debates. Recent advances in the field of Artificial Neural Networks have led to a renaissance of dystopian and utopian speculations on an AI-rendered future. Algorithmic technologies are deployed for identifying potential terrorists through vast surveillance networks, for producing sentencing guidelines and recidivism risk profiles in criminal justice systems, for demographic and psychographic targeting of bodies for advertising or propaganda, and more generally for automating the analysis of language, text, and images. Against this background, the aim of this book is to discuss the heterogeneous conditions, implications, and effects of modern AI and Internet technologies in terms of their political dimension: What does it mean to critically investigate efforts of net politics in the age of machine learning algorithms?

This collection brings methods and questions from humanities, law and social sciences disciplines to examine different instances of lawmaking. Contributors explore the problematic of past law in present historical analysis across indigenous Australia and New Zealand, from post-Franco Spain to current international law and maritime regulation, from settler colonial humanitarian debates to efforts to end cruelty to children and animals. They highlight problems both national and international in their implication. From different disciplines and theoretical positions, they illustrate the diverse and complex study of law’s history.

In recent years the MBR market has experienced unprecedented growth. The best practice in the field is constantly changing and unique quality requirements and management issues are regularly emerging. *Membrane Biological Reactors: Theory, Modeling, Design, Management and Applications to Wastewater Reuse* comprehensively covers the salient features and emerging issues associated with the MBR technology. The book provides thorough coverage starting from biological aspects and fundamentals of membranes, via modeling and design concepts, to practitioners' perspective and good application examples. *Membrane Biological Reactors* focuses on all the relevant emerging issues raised by including the latest research from renowned experts in the field. It is a valuable reference to the academic and professional community and suitable for undergraduate and postgraduate teaching in Environmental Engineering, Chemical Engineering and Biotechnology.

Over 80% of globally produced wastewater receives little or no treatment before it is disposed into the environment. Therefore, it is urgent to develop new wastewater treatment technologies that are sustainable in the broad sense of the word, i.e. not only produce high quality effluents, but also minimise energy expenses, recover energy and nutrients, and apply technology that is appropriate in relation to the availability of skilled personnel. This book compiles the main outcomes of recent efforts to improve the design of waste stabilisation ponds, and confirms the superior performance of high rate algal ponds as a result of process intensification. Anaerobic digestion devoted to biogas production continues to be the preferred strategy for the energy valorisation of the algal biomass, co-digestion with multiple high C/N ratio substrates gathering significant attention over the past years. The potential of algal biomass as a biosorbent for heavy metal removal (Cu, Ni, F) maintains its share in the research field of water bioremediation, while research on nutrient removal has focused on providing new insights on the mechanism of nitrogen and phosphorus removal from wastewater in algal–bacterial systems. Finally, it is worth noticing that breakthroughs in complementary fields of research such as nanotechnology or lighting technology are gradually being implemented in algal biotechnology, with new products such as nanoparticles for water disinfection or photobioreactors illuminated by low intensity LED panels. In *Focus* – a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in-depth understanding and inspire further conversations in the sector.
