Every year in the US, almost two million children run away from home. In addition, on the average, the police in our country have at any one time over 100,000 active missing-adult cases. This book will show readers how, with just a little advance preparation and insight, they can greatly increase their chances of finding a missing loved one, even after police have stopped actively looking. With sensationalized child disappearances, teenagers vanishing, and adults faking their own deaths, the challenge of finding missing persons often falls most directly on those who love them. And though in past years this involved a considerable amount of footwork, that is no longer the case. With the advent of the Internet and the many new search engines available, much of the searching and canvassing can now be done from computers. Family members and friends looking for missing loved ones need to know what programs and databases to access, though, to get the search under way. Snow, reveals to readers the process the police use when trying to locate missing people of interest, information that readers can then use to locate their own missing loved ones. Using real stories and first hand accounts, the author offers hope and guidance to those who may have given up the search for a child, a spouse, a parent, or a friend.

This custom edition is published for Griffith University. Pearson VitalSource editions - digital books that fit your portable lifestyle The full text downloaded to your computer. This Second Edition of Cost-Effectiveness Analysis continues to provide the most current, step-by-step

guide to planning and implementing a cost analysis study. Henry M. Levin and Patrick J. McEwan use detailed and varied examples from studies and articles, ranging from education to public health, to introduce the principles and practice of cost-effectiveness analysis. The authors take account of both the costs and the effects of selecting alternatives, and suggest methods of minimizing the costs of research. New to this edition: expanded coverage of cost effectiveness from types of technique to use, to how to interpret the data; the latest information on cost benefits analysis and how to relate it to outcome measures; in-depth chapter-end exercises to enable readers to sharpen their ability to evaluate policy options and program effectiveness; feedback appendix for readers to evaluate their responses to exercises; comprehensive bibliography of methodological sources on cost analysis and educational settings grouped by category. This thorough volume primes the reader to deal with any evaluation situation by studying cost-effective analysis in relation to cost-benefit analysis, cost-utility analysis, and cost-feasibility analysis.

Examines some leading issues from the perspective of sharply opposing points of view to show clearly the controversies of a given issue.

Microsoft Outlook Programming unleashes the power of Microsoft Outlook, allowing administrators and end users to customize Outlook in the same way that they've used macros and templates to customize other programs like Excel and Word. Experienced developers will find the quick-start information they need to begin integrating Outlook into their applications. Microsoft Exchange administrators will get help automating common tasks such as announcing public folders and importing data to custom forms. Microsoft Outlook is the most widely used email program, and it offers the most programmability. This book introduces key concepts for programming both Outlook forms for storing and exchanging data and Visual Basic for Applications modules that add new features to Outlook. Central to this new edition, which covers both Outlook 2000 and Outlook 2002, is awareness of tighter security in Outlook. Designed to prevent transmission of computer viruses, the security restrictions can also get in the way of legitimate programs, but this book offers workarounds within the reach of novice programmers. It also covers many of the new features of Outlook 2002, such as the integrated Outlook View Control and searching across multiple folders using SQL syntax and the Search object. · Building block procedures for the most common Outlook programming tasks · Jargon-free language and practical examples to make the material more accessible to new Outlook programmers · Coverage of Outlook Email Security Update · Coverage of the Office XP Web Services Toolkit

Appearances - The Art of Class is an examination of the subtle refinements which make one an elitist.

The Deputy Commissioner of General Services Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: preparing written material; understanding and interpreting written material; administration; organizing data into tables and records; and other related areas.

When a bad day at work culminates in losing out on a promotion, Jim Sanders shifts into his animal form to let off steam. Then his bad day turns into a bad night-while prowling his Atlantic City neighborhood as a large gray house cat, he's caught in a torrential downpour. What little luck he has washes down the gutter when his new boss, Andrew Wright, catches him taking shelter on his porch, brings him inside, and starts calling him Mr. Frosty. As a feline, Jim becomes the inadvertent confessor for his boss's lonely son, Tony, a victim of schoolyard bullying. As a human, he feels drawn to Andrew, a man he wanted to resent. Finding love was never part of Jim's plan for the future-not with his bizarre secret-yet suddenly he finds himself navigating that minefield anyway. But not everything is easy, especially for an interracial gay couple dealing with prejudice in the workplace, at Tony's school, and even within their own families.
