Microsoft Project is a leading project management software that enables managers and individuals to achieve project outcomes faster and more efficiently. With Microsoft Project training from New Horizons, you'll learn how to analyze resources, manage timelines and measure progress at a glance.

This ILT Series course builds on the fundamentals taught in Project 2002: Basic. In this advanced course, students will learn how to create baseline and interim plans, analyze project statistics, reschedule projects, format a project file, create custom reports. Course activities also cover communicating project schedules by using Microsoft Project Server, saving project data for the Web, and consolidating project files. Students also learn how to integrate Project data with Excel, Access, and Word. Finally, students create a custom Network Diagram view and automate tasks with macros. The manual is designed for quick scanning in the classroom and filled with interactive exercises that help ensure student success.

The 'New Perspectives' series combines innovative text with technology for teaching computer concepts, operating systems, the Internet, e-commerce, and microcomputer applications. Critical thinking and problem solving is encouraged with the use of realistic cases and solid end-of-tutorial exercises.
