Cervical Cancer Screening | ACOG

Those aged 25 to 65 should have a primary HPV test* every 5 years. If primary HPV testing is not available, screening may be done with either a co-test that combines an HPV test with a Papanicolaou (Pap) test every 5 years or a Pap test alone every 3 years. (*A primary HPV test is an HPV test that is done by itself for screening.

The American Cancer Society Guidelines for the Prevention ...

Screening Guidelines. The American Cancer Society (ACS), ASCCP, and the American Society for Clinical Pathology (ASCP) have released guidelines for the prevention and early detection of cervical cancer. The guidelines generally advise a reduction in the number of tests women get over their lifetime to better ensure that they receive the benefits of testing while minimizing the harms, and include a preference for co-testing using the Pap test and HPV test for women age ages 30 to 65.

Guidelines - ASCCP

Rather than consider screening test results in isolation, the new guidelines use current and past results, and other factors, to create individualized assessments of a patient's immediate risk of precancer (CIN3+), or 5-year risk of progressing to precancer or cancer.

Management Guidelines - ASCCP

You should start getting Pap tests at age 21. If your Pap test result is normal, your doctor may tell you that you can wait three years until your next Pap test. If You Are 30 to 65 Years Old. Talk to your doctor about which testing option is right for you! A Pap test only.
