(Redirected from NX Nastran) NASTRAN is a finite element analysis (FEA) program that was originally developed for NASA in the late 1960s under United States government funding for the aerospace industry. The MacNeal-Schwendler Corporation (MSC) was one of the principal and original developers of the publicly available NASTRAN code.

~~Nastran - Wikipedia~~

Nastran Input One of the key capabilities in ADINA for interfacing to other finite element modeling software is file import to ADINA via the Nastran file format. The user can create the finite element model in another program (e.g., NX (Simcenter 3D), Femap, Ansa, Hypermesh) and export the model to a Nastran file.

I have been using Femap for many years now, always with Nastran as the solver. Different versions of Nastran but thats another story. I have no plan to stop using Nastran but I have become a bit curious regarding Adina. Basically, I have part of Adina as SOL 601/701 in NX Nastran but the full Adina package seems interesting.

~~Using Adina with Femap - Finite Element Analysis (FEA) -~~

The Nastran file is imported into ADINA and some small modifications are made. The analysis is then performed with ADINA and the results are translated to universal file format for post-processing in NX. Previously, we had given an overview of how ADINA can be used with various third party pre- and post-processors (ADINA News, March 30, 2008).
