The main purpose of this project was to build a permanent magnet linear synchronous generator prototype for wave energy conversion. The electromagnetic analysis was done by the finite element method. With this analysis, the excitation system was defined and the cogging-forces were calculated.

It also features case studies on flat PM, tubular PM, air-cored, and hybrid linear synchronous motors, as well as 3D finite element method analysis of tubular linear reluctance motors, and linear oscillatory actuators. With such an exceptional presentation of practical tools and conceptual illustrations, this volume is an especially powerful ...
