The Dictionary also lists abbreviated names of relevant organizations, conferences, symposia and workshops. This book constitutes the thoroughly refereed post-conference of the 11th International Symposium on Computer Music Modeling and Retrieval, CMMR 2015, held in Plymouth, UK, in June 2015. The 30 full papers presented were carefully reviewed and selected from 126 submissions.

This year's post symposium edition contains peer-reviewed and revised articles centered around the conference theme "Music, Mind, and Embodiment". It is divided into 6 sections devoted to various sound and technology issues with a particular emphasis on performance, music generation, composition, analysis and information retrieval, as well as relations between sound, motion and gestures and human perception and culture.

Design and manufacturing is the essential element in any product development lifecycle. Industry vendors and users have been seeking a common language to be used for the entire product development lifecycle that can describe design, manufacturing and other data pertaining to the product. Many solutions were proposed, the most successful being the Standard for Exchange of Product model (STEP). STEP provides a mechanism that is capable of describing product data, independent from any particular system. The nature of this description makes it suitable not only for neutral file exchange, but also as a basis for implementing, sharing and archiving product databases. ISO 10303-AP203 is the first and perhaps the most successful AP developed to exchange design data between different CAD systems. Going from geometric data (as in AP203) to features (as in AP224) represents an important step towards having the right type of data in a STEP-based CAD/CAM system. Of particular significance is the publication of STEP-NC, as an extension of STEP to NC, utilising feature-based concepts for CNC machining purposes. The aim of this book is to provide a snapshot of the recent research outcomes and implementation cases in the field of design and manufacturing where STEP is used as the primary data representation protocol. The 20 chapters are contributed by authors from most of the top research teams in the world. These research teams are based in national research institutes, industries as well as universities.

Bringing together leading experts and scholars from around the world, this Handbook provides a comprehensive overview of the latest theories and research on intercultural competence. It will be a useful and invaluable resource to administrators, faculty, researchers, and students.

Books on intercultural communication are rarely written with an intercultural readership in mind. In contrast, this multinational team of authors has put together an introduction to communicating across cultures that uses examples and case studies from around the world. The book further covers essential new topics, including international conflict, social networking, migration, and the effects technology and mass media play in the globalization of communication. Written to be accessible for international students too, this text situates communication theory in a truly global perspective. Each chapter brings to life the links between theory and practice and between the global and the local, introducing key theories and their practical applications. Along the way, you will be supported with first-rate

learning resources, including:

- theory corners with concise, boxed-out digests of key theoretical concepts
- case illustrations putting the main points of each chapter into context
- learning objectives, discussion questions, key terms and further reading framing each chapter and stimulating further discussion
- a companion website containing resources for instructors, including multiple choice questions, presentation slides, exercises and activities, and teaching notes.

This book will not merely guide you to success in your studies, but will teach you to become a more critical consumer of information and understand the influence of your own culture on how you view yourself and others.

Within the framework of tourism companies and tourist destinations, the question of sustainability is gaining importance. Tourists are increasingly aware of the importance of sustainability criteria, awarding greater value to sustainable destinations. Sustainability refers to a wide range of aspects related to climate change, the economic organization of tourism, social values or questions, job creation, and the necessary protection of the culture of destinations and the environment. Therefore, there is a need for studies that consider these aspects in order to achieve the sustainable development of tourist destinations. Fundamental to this is discovering to what degree tourism companies and destinations approach these questions in the strategies they use to deal with problems stemming from their attempts to be more sustainable. Conceptual papers and empirical research on the economic, social, cultural, and environmental aspects related to tourism companies and destinations are welcome. Studies that analyze how these questions and the concept of sustainability are included in tourism companies and destinations are necessary in these modern times. This book was established for these reasons, dedicated to examining sustainability in tourism. The papers included in this Special Issue can help us to determine the new directions being addressed in the research on sustainability tourism.
