A classic textbook that has guided generations of students through the intricacies of property valuation, *The Income Approach to Property Valuation* remains a keen favourite amongst students and teachers alike. This new edition has been thoroughly revised and updated to meet the increasingly international perspectives of modern Real Estate students. The links between theory and practice are clearly demonstrated throughout, with a range of new international case studies and practice-based examples. *The Income Approach to Property Valuation* teaches readers: how to analyse market rents and sales prices to derive market evidence to support an opinion of market value; the investment method of valuation and how it is applied in practice; how specific legal factors can impact on market value when they interfere with market forces; what the market and the profession may consider to be the 'right' methodology in today's market place; and how to use spreadsheets in valuation. This extensively revised new edition is perfect both for students on Real Estate courses worldwide and for professional candidates working towards their final assessment of professional competence (APC) for the Royal Institution of Chartered Surveyors, needing to demonstrate a valuation competence at levels 2 and 3.

Property Valuation Principles is a user-friendly introduction to property valuation for students and practitioners who are new to the subject. Packed with worked examples and photos, the text covers the five main methods of valuation, their application in a variety of markets and their relation to the wider economic context. The second edition features: - Discussion on the impact of sustainability on valuation. - Photographs to illustrate different property characteristics and settings. - Even more worked examples, including buy-to-let residential properties and affordable housing.

This new edition of the 'all in one' textbook for the postgraduate study of valuation on real estate courses retains its focus on the valuation and appraisal of commercial and industrial property across investment, development and occupier markets. It is structured from the client perspective and covers single-asset pricing, risk and return issues. The structure of the book has been substantially revised. Part A introduces the key microeconomic principles, focussing on land as a resource, production functions, supply and demand and price determination. The locational aspect of real estate is also introduced. Macroeconomic considerations are categorised by the main market sectors (and their function); the market for land (development), for space (occupation) and for money (investment). The economic context is set and the author then explains why property valuations are required and discusses the main determinants of value and how they might be identified. The mathematics required to financially quantify value determinants are also introduced. Part B of the book describes the methods of valuation; Part C applies these methods to the valuation of a range of property types for a wide variety of purposes; and Part D covers investment and development appraisal. The author introduces valuation activities from a broad economic perspective, setting valuation in its business finance context and combining its academic and practical roots. Changes in this second edition include: less daunting economics expanded companion website with PowerPoint slides for lecturers, self-test Questions & Answers for students: see <http://www.wiley.com/go/wyattpropertyvaluation> www.wiley.com/go/wyattpropertyvaluation/a up-to-date case studies and sample valuations reference to the newly-published Red Book (the valuer's bible) Property Valuation with its user-friendly format, using tried-and-tested teaching and learning devices and a clear writing style, remains the core text for students on real estate, estate management and land economy degree courses, as well as for fast-track conversion courses for non-cognate graduates.
