As the conversion of legacy systems continues, the ability to understand embedded business rules becomes more and more critical. This ability is directly related to the structure of the programs within those systems. We also see the need to teach structured programming to a new generation of programmers who must maintain the billions of lines of existing COBOL code. The ultimate purpose of this text is to discuss how to judge the level of structure of a program. We do this by defining structured programming and then discussing how a structured program can be built through the application of the concepts of coupling and cohesion. We also show how embedded business rules of the program can be separated from the data and presentation functions. The reader will be able to use to these skills to judge and to improve the structure of a new program or an existing program.

The legal regime of outer space, as enshrined in the Declaration of Legal Principles Governing the Activities of States in the Exploration and Use of Outer Space (General Assembly Resolution 1962 (XVIII), adopted in 1963, and in the 1967 Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies, while prohibiting the appropriation of space by any means, envisages exploration for the benefit and in the interest of all countries on a basis of equality and in accordance with international law. Freedom of scientific investigation is also contemplated. Elaborating on these instruments, the Assembly in 1996 adopted the Declaration on International Cooperation in the Exploration and Use of Outer Space (RES 51/122), in which it called for heightened international co-operation, with particular attention to be given to the benefit for and the interests of developing countries and countries with nascent space programmes. Thus, it is self-evident that the outer space regime, including the 1972 Liability Convention, envisages the conduct of national activities “ for the benefit and in the interests of all countries, irrespective of their degree of economic or scientific development ” . In this regard, Article 6 of the 1967 Treaty not only provides for national activities in outer space, but for international responsibility whether such activities are carried out by governmental agencies or non-governmental entities, and aims at ensuring that national activities are conducted in conformity with the Treaty.
