If it's not picking up the paper from the tray, it could be a number of things. Check the cam gear on the paper tray itself. Sometimes it can be located on the body and lifts a lever on the tray. designed to lift the paper to align with the roller. check the pickup rollers are touching the paper when the tray is closed.

My CLP-300 acts as though it were picking up the paper about 3/8 of an inch early, resulting in the top of the print being cut off and an extra wide margin on the bottom. Since it isn't likely that the paper pickup could be picking up too soon (too late, I could believe but not too soon) then perhaps the paper is getting to the transfer belt too late?
