With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area—Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type—core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed—and the only guide of its kind—Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

From leading authorities, this volume presents a unique evidence-based group intervention for the 10–15% of children who are challenged by peer difficulties in elementary school. The book features 145 engaging full-color reproducible handouts, posters, and other tools. In addition to teaching core social skills (participation, communication, cooperation, good sportsmanship, conflict resolution), Friendship Group promotes emotional understanding and empathy, self-control, and effective coping with social stressors. Two complete sets of sessions are provided (grades K–2 and 3–5), including step-by-step implementation guidelines. The large-size format facilitates photocopying; purchasers also get access to a Web page where they can download and print the reproducible materials.

Finding a way of simultaneously addressing the sensory, motor, emotional, communicative, cognitive and social needs of children on the autism spectrum can be a real challenge, and choosing from the vast array of options available is a daunting task. This book provides a blueprint for an educational intervention program that is evidence-based, comprehensive in scope and integrative in its approach. Grouping techniques into five categories for discussion, the book examines autism spectrum disorders within a developmental context, and shows that interventions with autistic individuals are not only possible, but can be really successful. Specific intervention strategies and program examples for developing competencies in areas such as joint attention, sensory integration, motor functioning, impulse

control, memory, self-awareness, theory of mind and empathy, abstract thinking, problem-solving, social skills and community engagement, are presented. Techniques for dealing with specific behavior problems are also examined, including toileting delays, temper-tantrums, and eating and sleeping problems, amongst many others. This book will be essential reading for families, teachers, and other professionals working with children with autism.

With more than 110 easy-to-use, reproducible worksheets, this series is ideal for enrichment or for use as reinforcement.
